

PERSONAL INFORMATION

Full name	Tạ Minh Trí		
Nationality	Vietnamese	Sex	Male
Birth	1990	Home telephone	0932420089
Address	Hanoi, Viet Nam		
Email	minhted@gmail.com		
Website	https://tritm-landipage-cv.net/		

LANGUAGE

Vietnamese	Mother tongue
English	Medium

EDUCATION

2010 - 2015	HaNoi university of Science and Technology <i>Computer Engineering</i>
2018 - 2020	HaNoi university of Science and Technology <i>Computer Network and Data Communication</i>

EXPERIENCE/ABILITY

Professional skills

- ❖ **10+ years** of progressive experience in enterprise infrastructure and DevOps engineering
- ❖ **Lead DevSecOps Engineer** with proven track record in financial services and securities industry
- ❖ **Expert-level** proficiency in cloud-native technologies and container orchestration
- ❖ **Certified** in multiple industry-standard technologies (CEH, CCNP, CCNA)
- ❖ **Hands-on experience** with high-availability systems supporting millions of transactions daily
- ❖ **Strong leadership** skills with experience mentoring development teams and driving technical initiatives
- ❖ **Problem-solving expertise** in complex distributed systems and performance optimization
- ❖ **Security-focused** approach to infrastructure design and implementation
- ❖ **Bilingual** communication skills enabling effective collaboration in international

Certification

- ❖ 2015: Certification of Completion CEH
- ❖ 2013: Certification of Completion CCNP
- ❖ 2012: Certification of Completion CCNA

Industry Expertise

- ❖ **Financial Services:** Securities trading systems, digital banking platforms, fintech solutions
- ❖ **High-Frequency Trading:** Real-time processing, low-latency systems, market data handling
- ❖ **Enterprise Architecture:** Microservices, event-driven architecture, API-first design
- ❖ **Cloud Migration:** Multi-cloud strategies, lift-and-shift, cloud-native transformation
- ❖ **DevSecOps:** Security integration, compliance automation, vulnerability management
- ❖ **Site Reliability Engineering:** SLA/SLO management, incident response, capacity planning
- ❖ **Technology Consulting:** Solution architecture, technology roadmaps, best practices implementation

Technical Skills

Cloud Platforms & Infrastructure

- ❖ **AWS:** EKS, ECS, EC2, S3, RDS, VPC, IAM, Landing Zone, CloudFormation, Terraform (Advanced)
- ❖ **CMC Cloud:** VM, Storage, Network, Load Balancer (Advanced)
- ❖ **Kubernetes:** Cluster management, Helm, Operators, Service Mesh (Expert)

DevOps & Automation

- ❖ **CI/CD:** Jenkins, GitLab CI, GitHub Actions, ArgoCD (Expert)
- ❖ **Infrastructure as Code:** Terraform, Ansible, CloudFormation (Advanced)
- ❖ **Containerization:** Docker, Podman, Container Registry (Expert)
- ❖ **Configuration Management:** Ansible, Chef, Puppet (Advanced)

Programming & Scripting

- ❖ **Languages:** Golang (Expert) - GraphQL development with gqlgen, Python (Intermediate), Shell Scripting (Expert), Java (Intermediate)
- ❖ **API Technologies:** GraphQL with gqlgen, REST, gRPC, OpenAPI (Advanced)
- ❖ **Go Frameworks:** Gin, Fiber, gqlgen for GraphQL (Advanced)
- ❖ **Markup:** YAML, JSON, XML (Expert)

Database & Storage

- ❖ **RDBMS:** PostgreSQL, MySQL, Oracle with HA/DR setup (Advanced)
- ❖ **NoSQL:** Redis, MongoDB, Elasticsearch (Intermediate)
- ❖ **Distributed Storage:** MinIO, Ceph, GlusterFS (Intermediate)

Monitoring & Observability

- ❖ **Monitoring:** Prometheus, Grafana, Nagios, Zabbix (Advanced)
- ❖ **Logging:** ELK Stack, Fluentd, Loki (Advanced)
- ❖ **APM:** Jaeger, Zipkin, New Relic (Intermediate)

Security & Compliance

- ❖ **Security Tools:** Vault, SOPS, SonarQube, Trivy (Advanced)
- ❖ **Network Security:** Firewalls, VPN, SSL/TLS, Zero Trust (Advanced)
- ❖ **Compliance:** SOC2, PCI DSS, ISO 27001 knowledge (Intermediate)

Middleware & Messaging

- ❖ **Message Brokers:** Kafka, RabbitMQ, NATS (Advanced)
- ❖ **API Gateway:** Kong, Istio, Apisix, AWS API Gateway (Advanced)
- ❖ **Cache:** Redis Sentinel/Cluster, Memcached(Advanced)

Project Management & Soft Skills

- ❖ **Methodologies:** Agile/Scrum, DevOps, SRE practices (Expert)
- ❖ **Leadership:** Team lead experience, mentoring, cross-functional collaboration (Advanced)
- ❖ **Problem Solving:** Incident response, root cause analysis, performance tuning (Expert)

EMPLOYMENT HISTORY

07/2025 - today	VFS Securities Position: Lead DevSecOps
02/2024 – 05/2025	SHS Positions: Infra, DevOps, SRE
01/2022 – 02/2024	TPBank Positions: Infra, DevOps, SRE.
01/2016 – 12/2021	HaNoi university of Science and Technology Positions: Engineer, SA, Developer, Operator

NOTABLE PROJECTS

Multi-Environment Development Process Implementation (VFS)

Duration: Jul 2025 – now

- ❖ **Technology Stack:** Kubernetes, Kafka, API Gateway, Redis, Minio, HAProxy, Keepalived, Prometheus, Grafana, ELK Stack
- ❖ **Role:** Lead DevSecOps Engineer
- ❖ **Key Achievements:**
 - Designed and implemented enterprise-grade 3-tier environment architecture (SIT/UAT/PROD) on CMC Cloud
 - Architected secure network topology with segregated public/private subnets, reducing security risks by 60%
 - Established standardized deployment processes, improving release consistency by 85%
- ❖ **Objective:** Complete redesign of product development workflow for enhanced performance and scalability

CI/CD Pipeline with Jenkins (VFS)

Duration: Jul 2025 – now

- ❖ **Technology Stack:** Jenkins, Kubernetes, Docker, GitOps, Helm Charts, SonarQube, Nexus
- ❖ **Role:** Lead DevSecOps Engineer
- ❖ **Key Achievements:**
 - Built enterprise CI/CD pipeline supporting 50+ microservices with automated testing and security scanning
 - Reduced deployment time from 4 hours to 15 minutes through automation
 - Implemented GitOps workflow with automatic rollback capabilities, achieving 99.9% deployment success rate
- ❖ **Objective:** Full automation of development lifecycle with integrated security and quality gates

Middleware Infrastructure Deployment (VFS)

Duration: Jul 2025 – now

- ❖ **Technology Stack:** Redis Sentinel, Kafka Kraft, NATS, Kubernetes, Helm, Ansible
- ❖ **Role:** Lead DevSecOps Engineer
- ❖ **Key Achievements:**
 - Deployed highly available Redis Sentinel clusters across 3 environments supporting 10M+ transactions/day
 - Implemented Kafka Kraft architecture eliminating ZooKeeper dependency and improving performance by 40%
 - Established NATS messaging system for real-time communication with sub-millisecond latency
- ❖ **Objective:** Build resilient messaging and caching infrastructure for high-frequency trading systems

High Availability PostgreSQL Implementation (VFS)

Duration: Jul 2025 – now

- ❖ **Technology Stack:** PostgreSQL, Patroni, Ansible, HAProxy, Keepalived, Monitoring Stack
- ❖ **Role:** Lead DevSecOps Engineer
- ❖ **Key Achievements:**
 - Designed and deployed PostgreSQL HA clusters with automatic failover achieving 99.99% uptime
 - Implemented Patroni for seamless leader election and replica management
 - Automated database provisioning with Ansible, reducing setup time from days to hours
- ❖ **Objective:** Ensure zero-downtime database operations for critical financial applications

AWS Cloud Infrastructure for Lending Project (VFS)

Duration: Jul 2025 – now

- ❖ **Technology Stack:** AWS EKS, VPC, Landing Zone, ECR, IAM, RDS, S3, CloudFormation, Terraform
- ❖ **Role:** Lead DevSecOps Engineer
- ❖ **Key Achievements:**
 - Architected secure multi-account AWS environment with Landing Zone best practices
 - Implemented EKS clusters with auto-scaling capabilities handling 100K+ concurrent users
 - Established comprehensive IAM security model with least-privilege access principles
 - Built disaster recovery strategy with RTO < 30 minutes and RPO < 5 minutes

GraphQL Migration Initiative (VFS)

Duration: Jul 2025 – now

- ❖ **Technology Stack:** GraphQL, gqlgen, Golang, Apollo Federation, Kubernetes, API Gateway, Monitoring
- ❖ **Role:** Lead DevSecOps Engineer
- ❖ **Key Achievements:**
 - Leading migration of 30+ REST APIs to GraphQL federation architecture using Golang and gqlgen
 - Developed high-performance GraphQL resolvers in Golang achieving 45% reduction in API response times
 - Implemented GraphQL schema-first development approach with automated code generation using gqlgen
 - Built comprehensive testing framework for GraphQL operations with Go testing libraries
 - Established GraphQL schema governance and versioning strategies for microservices architecture
- ❖ **Objective:** Modernize API architecture for improved performance and developer experience using Golang ecosystem

Product Development Process Re-architecture (SHS)

Duration: March 2024 – May 2025

- ❖ **Technology Stack:** Kubernetes, Kafka, API Gateway, Redis, Minio, Haproxy, Keepalived, Prometheus, Grafana, ELK, ...
- ❖ **Role:** DevOps Engineer
- ❖ **Responsibilities:** System design, integration, performance optimization, and monitoring
- ❖ **Objective:** Redesign of product development process for enhanced performance and scalability

Go Image Cleanup for Worker Kubernetes (SHS)

(<https://github.com/tedminht90/go-image-cleanup>)

Duration: December 2024 - February 2025

- ❖ **Technology Stack:** Golang, Cri-O, Kubernetes, Linux, SQLite, Prometheus
- ❖ **Role:** DevOps Engineer, Developer
- ❖ **Responsibilities:**
 - Designed and implemented an automated container image cleanup utility for Kubernetes clusters
 - Developed a configurable policy system for identifying and removing unused container images
 - Implemented efficient multi-threading for parallel processing of image cleanup tasks
 - Created detailed logging and monitoring for tracking cleanup operations
- ❖ **Achievement:**
 - Reduced disk space usage on worker nodes by 35%
 - Improved cluster performance by optimizing container image storage
 - Implemented as a standard tool across all SHS Kubernetes environments

Real-time Data Synchronization System (SHS)

Duration: October 2024 - November 2024

- ❖ **Technology Stack:** Kafka, Zookeeper, Debezium, Kafka-UI
- ❖ **Role:** DevOps Engineer, Developer
- ❖ **Responsibilities:** Design and implementation of Change Data Capture architecture
- ❖ **Achievement:** Successfully implemented real-time synchronization between MySQL, PostgreSQL, and Oracle databases

Keycloak Integration Project (SHS)

Duration: August 2024 - September 2024

- ❖ **Technology Stack:** Keycloak, Golang, Fiber, Gocloak, JWT, Viper
- ❖ **Team Size:** 3 members
- ❖ **Role:** DevOps Engineer, Developer
- ❖ **Responsibilities:**
 - Kubernetes deployment of Keycloak
 - Development of user management APIs
 - Implementation of role-based access control

Distributed Storage System Implementation (SHS)

Duration: July 2024 - August 2024

- ❖ **Technology Stack:** MinIO, HAProxy, Keepalived, AWS S3, CloudFront, Golang
- ❖ **Team Size:** 3 members
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievements:**
 - Built high-availability MinIO cluster
 - Developed file management API for frontend and third-party integration
 - Implemented seamless integration with S3 storage

High-availability Redis Cluster (SHS)

Duration: July 2024 - August 2024

- ❖ **Technology Stack:** Redis Sentinel, HAProxy, Keepalived
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievement:** Successfully implemented Redis cluster with Sentinel architecture for high availability

API Gateway and Database Infrastructure (SHS)

Duration: July 2024 - August 2024

- ❖ **Technology Stack:** WSO2, PostgreSQL, etcd, Patroni, HAProxy, Keepalived, PgBouncer
- ❖ **Monitoring Tools:** PostgreSQL Exporter, Prometheus, Grafana
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Key Implementations:**
 - WSO2 API Gateway for external zone and internal zone
 - Kubernetes-based deployment

Configuration Management System (SHS)

Duration: April 2024 - May 2024

- ❖ **Technology Stack:** HashiCorp Vault, ArgoCD, Argocd-vault-plugin
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievement:** Implemented unified configuration management across development and production environments

On-premises Kubernetes Cluster (SHS)

Duration: March 2024 - April 2024

- ❖ **Technology Stack:** HAProxy, etcd, CRI-O, Cilium, NGINX Ingress, Istio Service Mesh, NFS Storage
- ❖ **Tools:** Ansible, Kubespray, Python
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievement:** Successfully deployed Kubernetes clusters in UAT and Production environments

CI/CD Pipeline Implementation (SHS)

Duration: March 2024 - April 2024

- ❖ **Technology Stack:** GitLab, Jenkins, ArgoCD, Slack, SonarQube, Trivy, Harbor
- ❖ **Programming:** Groovy, Bash Script, Java Spring Boot
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievements:**
 - Implemented DevSecOps practices
 - Established automated CI/CD workflows
 - Set up dependency management with Nexus

Enterprise Messaging System (SHS)

Duration: March 2024 - April 2024

- ❖ **Technology Stack:** Kafka, mTLS, Prometheus, Grafana, Kafka UI
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievements:**
 - Implemented high-availability Kafka cluster
 - Set up SASL and SSL authentication
 - Established comprehensive monitoring

Application Monitoring and Observability (SHS)

Duration: March 2024 - April 2024

- ❖ **Technology Stack:** Prometheus, Grafana, ELK Stack, Jaeger, Logstash, Fluentd
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievements:** Implemented comprehensive monitoring, logging, and tracing solution

E-Banking Microservices Operations (TPBank)

Duration: December 2022 - February 2023

- ❖ **Technology Stack:** Node.js, OKD OpenShift, Helm
- ❖ **Programming:** Python, Bash Script
- ❖ **Role:** Site Reliability Engineer
- ❖ **Achievements:** Successfully managed and scaled approximately 100 microservices

Database Performance Optimization (TPBank)

Duration: December 2022 - February 2023

- ❖ **Technology Stack:** SolarWinds, Prometheus, Grafana, Golang
- ❖ **Role:** Site Reliability Engineer
- ❖ **Achievements:**
 - Optimized high-connection Oracle database
 - Improved SQL query performance
 - Developed custom metrics collection system

Built OKD and OCP Openshift

Duration: June 2022

- ❖ **Technology Stack:**
 - Red Hat OpenShift (OKD and OCP)
 - HAProxy, Keepalived
 - Storage Solutions: NFS, GlusterFS (GFS2)
 - Bash Scripting
- ❖ **Team Size:** 4 members
- ❖ **Role:** Infrastructure Engineer, DevOps Engineer
- ❖ **Achievements:**
 - Successfully deployed both OKD (Origin Community Distribution) and OCP (OpenShift Container Platform)
 - Implemented high-availability cluster configuration
 - Set up robust storage solutions using NFS and GlusterFS
 - Created automation scripts for routine maintenance tasks
 - Established backup and disaster recovery procedures
